<b>POWER</b>	3ph / 208, 230, 480V
<b>FINISH</b>	2 Part Epoxy Acrylic Top Coat
<b>COLOR</b>	Machine Blue
<b>FOB</b>	Elgin, IL 60123

## V CHANGER

### The V Changer Overview:

The "V Changer" is the newest addition to Premier's wide selection of pallet transfer equipment. Like many of our pallet transfer machines, it features hands free operation. Due to the ground level loading table, the V Changer can be loaded and unloaded using a pallet truck. The integrity of a stack is retained by tipping the load using the "V" cradle method.

### V Changer Uses Include:

- Transfer wood pallets to plastic pallets or other hygienic pallets
- Switching outgoing loads to one-way or shipping pallets
- Handling loads which must remain upright after transfer
- Suited for block stacked loads

### V Changer Features:

- Handles loads from 23" to 80" high
- 3,000 lb. load capacity
- 208/230/480V 3 phase power supply
- Pallet latching system adjusts for variable pallet sizes
- Tilts 110° to safely retain palletized loads
- Flush to floor loading eliminates the need for a ramp
- Automatic push button control
- Strong construction and simple operation
